SUMMARY

Technical founder who sells, scopes, architects, and ships production AI software end-to-end with agentic coding. **Deep healthcare and life-sciences roots.** Pediatric-oncology research, FDA management consulting, and product strategy at CVS Health. Now building and shipping LLM enabled systems. Cursor and ClaudeCode power user.

Designed and built an offline-first clinical EHR for rural Uganda, autonomous multi-agent platforms, a deployed MCP server, and grounded, audit-safe AI in regulated verticals. Calm in ambiguity, biased toward shipping, and motivated by AI that removes redundant, important work and encourages human flourishing.

PROFESSIONAL EXPERIENCE

CappaWork | Founder and Principal Engineer

Aug 2021- Present

AI software studio. I sell, scope, architect, build, and deliver production software for small businesses that do good — solo, paired with Claude Code, Cursor, and Codex. Self-taught agentic development: the systems below were designed and shipped in the last 12 months.

- **Karibu Health** — Architected and built an Android, offline-first, AI-assisted EHR for rural Ugandan health centers
 - Kotlin/Compose Android, Next.js, Supabase/Postgres, Clerk, Inngest, Whisper.
 - Built a RAG pipeline grounded in Uganda Ministry of Health guidelines with a production grounding/faithfulness evaluation gate (citation-subset validation) that drops any AI suggestion not traceable to retrieved guideline text; a durable, idempotent sync engine (outbox + client op-IDs + pull reconciliation) that survives intermittent connectivity; and a clinician-authority-preserving AI UX at \$0.005 per patient visit.
 - Pilot clinic in Ssunga HC III, live June 1, 2026; 700 patients onboarded by August, 2026
- **Knock Recruit** — Built an AI-augmented recruiting platform with six durable autonomous agents
 - Inngest, SHA-256 idempotent runs, cross-provider fallback and a hybrid scoring engine pairing cost-optimized Claude Haiku/Sonnet model tiering (structured-output extraction) with deterministic, auditable decision math
 - In private beta.
- **CappaWork MCP** — Designed and deployed a remote Model Context Protocol server
 - TypeScript, six typed tools over a Supabase CRM for voice-driven task capture through Claude on mobile; diagnosed and fixed an SSE-vs-serverless transport incompatibility that was timing out 99.2% of invocations and had burned a month of fluid compute in ~36 hours.
 - In daily production use (single user)
- **Healthcare AIO** — Shipped a healthcare AI-visibility audit platform that grounds a multi-provider LLM diagnostic
 - Claude / Gemini / GPT with schema-validated failover in federal NPPES physician records and live AI-search citation data,
 - Scores across a deterministic three-pillar rubric; solo-built including the multi-tenant agency CRM and public lead-gen demos.
 - Live.
- **Reconstructing Wealth** — Designed and built an AI-native, SEC-compliant wealth-management platform
 - Next.js monorepo, Supabase, Clerk, Inngest with a provider-agnostic AI router dispatching 12 task types under per-task cost/latency budgets
 - Books-and-records audit controls (Rule 204-2) enforced entirely at the Postgres/RLS layer.
 - Demo-stage; client funding pending.
- **Client delivery platforms (ArborKey, Horizon Data Partners)** — Sold, scoped, and shipped production multi-tenant SaaS for paying clients in the HOA-management and data-consulting verticals
 - Human-in-the-loop LLM extraction (meetings, rosters, arbitrary CSVs → clean records), encrypted credential vaults, Stripe billing, and RLS multi-tenancy, with visible AI authorship and a human confirming every write.
 - Live.
- **Teaching & mentoring** — Built and taught a profitability curriculum for small-business owners, and coached two product managers one-on-one through hands-on agentic product development — turning non-engineers into shipping builders

Nate Pinches, MBA

Entromy | Director, Private Equity Partnerships

Feb 2021- August 2021

AI-driven enterprise and operational-insights startup ~\$1.5M ARR

- Sold AI-powered organizational-insight tooling into portfolio companies of **Apollo and General Atlantic**, closing \$150K in four months.
- Navigated complex multi-stakeholder, PE-channel buying cycles — selling both the fund's talent partner (channel sponsor) and the portfolio-company CEO (the actual user) — and learned firsthand why a sale routed through a non-user sponsor doesn't work.
- Partnered with C-suite execs to design human-capital assessment processes that surfaced operational challenges

Omnicare, A CVS Health Company | Senior Product Developer

Jan 2019- August 2020

Long-Term-Care pharmacy, ~\$4B annual rev, 10,000 employees; CVS subsidiary in active turnaround

- Led the redesign of the governance and operating model for the high-priority MultiDose product, with sign-off from the business president and the CVS COO.
- Drove a 36% year-over-year growth pivot for the vaccines program (~5,500 clinics) through operating-model and process change.
- Built the company's market-intelligence tool for customer segmentation — Tableau analysis joining public and private data across 2M+ data points and 55,000 customer records.

Eagle Hill Consulting | Associate | Health and Life Sciences

2016- 2018

A boutique 8a Federal management consulting firm ~\$35M yearly rev, offices in DC, Seattle and Boston.

- Consulted on-site at the FDA's White Oak campus for ~2 years under a workforce-capacity BPA: business-process improvement in the Office of Pharmaceutical Quality (tied to GDUFA/PDUFA), workforce-capacity planning in the Office of Operations, and forecasting for biologic-license applications (2018).
- Built the business case for and launched Eagle Hill's Boston office; personally relocated and won the firm's first client, a \$45B biotech (Vertex Pharmaceuticals).
- Held a U.S. Public Trust clearance (lapsed; full federal background investigation completed late 2018).

Dana-Farber Cancer Institute | Pediatric Neuro-Oncology | Clinical Research

2011- 2014

- Managed 7 actively accruing Phase I, II and III clinical trials and regulatory for 15+ chart review trials; Indications for sonic+ medulloblastoma, diffuse intrinsic pontine glioma, juvenile pilocytic astrocytoma,
- Led implementation of precision medicine trial; CLIA certified, multiplexed genome wide aCGH assay

Brigham and Women's Hospital | TIMI Study Group | Research Assistant

2010- 2011

- Managed 30 sites in North America for 18,000 patient Phase III cardiology trial: simvastatin vs simvastatin/ezetimibe; led local process improvements for regulatory filings

EDUCATION

Loyola University Maryland Master of Business Administration, GPA 3.9

2015- 2016

Providence College B.S., Biology – Philosophy Minor, Sigma Xi Research Honor Society

2006- 2010

RESEARCH and PUBLICATIONS

Research

Co-authored peer-reviewed research in oncology and cellular aging (Google Scholar: 227 citations, h-index: 4)

Selected:

Cebulski J, Malouin J, **Pinches N**, Cascio V, Austriaco N *Yeast Bax Inhibitor, Bxi1p, Is an ER-Localized Protein That Links the Unfolded Protein Response and Programmed Cell Death in *Saccharomyces cerevisiae**. PLoS ONE 2011

Ramikissoo S et al. *Clinical targeted exome-based sequencing in combination with genome wide copy number profiling: A CLIA certified approach for precision medicine in 203 pediatric brain tumors*. Neuro-Oncol 2017

INTERESTS and TECHNICAL SKILLS

My better half is an officer in the Navy. We spent our last 4 years stationed in Japan and got to travel a bunch. We have a ton of kids.

Languages & Frameworks: TypeScript, Next.js / React, SQL, Python (RAG & case-generation pipelines), Kotlin / Jetpack Compose

AI & Agents: Claude (Code, Cowork), MCP server design, agent orchestration & durable execution (Inngest), RAG & context engineering, structured output (Zod), multi-provider routing & fallback, prompt engineering, eval design (grounding/faithfulness, regression)

Platform & Data: Supabase (Postgres w/ RLS), Clerk, Vercel, Stripe, OpenAI Whisper, PostHog; Tableau, Power BI

Agentic Dev Tools: Claude Code, Cursor, Codex

Other: Lean Six Sigma Green Belt; U.S. Public Trust clearance (lapsed, 2018)
